SUMMARY

Software Engineer with 3+ years of experience in backend development and system integration. Proficient in PHP, JavaScript, and Java, with hands-on experience in Laravel, Symfony, Yii2 and Spring Boot, as well as modern frontend frameworks such as React and Vue. Experienced in designing RESTful APIs, integrating third-party services, and working with MySQL, PostgreSQL, Docker, and CI/CD pipelines.

WORK EXPERIENCE

Fastboy Marketing

February, 2025 – Present

Software Engineer

- Developed a new POS Retail System to streamline sales operations and optimize inventory management for convenience stores.
- Revamped and stabilized a previously failing Social Media Tool, improving performance and usability for more than 100 marketing staff members creating posts for Facebook, Instagram, and Google Business.
- Supported the setup of Docker-based environments and deployment pipelines for Frontend and Backend applications on Cloudflare and DigitalOcean App Platform.
- Designed effective CLAUDE instructions and workflows for CLAUDE CODE, enhancing development efficiency and coding productivity.

Fujinet System JSC

February, 2023 – January, 2025

Software Engineer

- Developed and maintained a web platform providing services for more than 20 universities in Japan.
- Optimized application performance by resolving N+1 query issues and improving inefficient SQL queries, reducing overall website latency.
- Supported the migration and upgrade of legacy projects from PHP 7.4 to PHP 8.0.
- Developed and maintained an IoT-based system for managing student entry and exit activities within schools.

EDUCATION

Nong Lam University (Ho Chi Minh) 2019 - 2023

- Bachelor of Information Technology.
- Degree grade: Credit – 3.19/4.0

TECHNICAL SKILL

- Programming languages: Java, PHP, JavaScript, TypeScript.
- Framework: Spring, Laravel, Symfony, Yii2, React, Vue.js.
- Database: MySQL, PostgreSQL.
- Queue: Job Queue, RabbitMQ.
- DevOps Tools: Docker, GitHub Actions, Cloudflare, DigitalOcean.
- Others: Linux (Fedora, Ubuntu), OOP, SOLID, Design Pattern.

LANGUAGE

- English: Intermediate proficiency in speaking and writing
- Vietnamese: Native

PROJECT

Social Media Tool

A middle platform that supports creating posts on social media.

Tech Stack: PHP (Yii2 Framework), MySQL, TypeScript, Vue.js, Yii2 Queue, Docker, Github Actions, DigitalOcean App Platform, Cloudflare Pages.

Team size: 4 members.

Responsibilities:

- Built and configured a multi-stage Docker environment for both local development and production deployment.
- Developed GitHub Actions CI/CD pipelines to automate testing, Docker image builds, and image publishing to DigitalOcean Container Registry for deployment on DigitalOcean App Platform.
- Created and maintained DigitalOcean App Spec configurations to manage application deployments using pre-built Docker image tags.
- Integrated Meta and Google APIs to support social media publishing, post scheduling, and account management features.
- Developed media management and image editing functionalities to streamline content creation workflows for marketing teams.
- Integrated Fastboy Marketing's CRM system to manage store social accounts and staff permission controls.
- Designed and optimized CLAUDE CODE instructions and workflows, improving development efficiency and overall coding productivity.

Knowledge Portal

Contributed to a university service platform used to manage schedules, announcements, and campus information across Japan.

Tech Stack: PHP (Yii2 Framework), MySQL, Typescript, Javascript, React, Yii2 Queue.

Team size: 10 members.

Responsibilities:

- Collaborated directly with clients to deliver features based on GitHub Issues, translating UI/UX designs and business requirements into scalable implementations.
- Developed multilingual functionality using the i18next pattern to support international users.
- Integrated DeepL AI to automate translations for announcements, emails, and platform content.
- Implemented Single Sign-On (SSO) authentication using SAML with Keycloak as the Identity Provider (IdP), enabling seamless university account access.
- Built a flexible Content Management System (CMS) using Editor.js for dynamic dashboard content management.
- Improved application performance by resolving N+1 query issues and optimizing inefficient SQL queries, significantly reducing website latency.
- Supported the migration and modernization of legacy systems from PHP 7.4 to PHP 8.0.
